

## Explanation of the grip parameters

If you're unsafe with the choice of the parameters, you can send us a [outline sketch of your hand](#).

### Size

**XXL\*** for 105mm-  
**XL\*** for 100mm-  
**L** for 95mm-  
**M** for 90mm-  
**S** for 85mm-  
**XS\*** for 80mm-  
**XXS\*** for 75mm-  
 hand width, measured across the knuckles, without the thumb.

\*= not for every pistol

### Side

All grips are available for **right** or **left** handed shooters.  
 (without extra charge)

### Form

To fill the hand completely, we offer:

**convex**

for a "normal" men's hand

**flat**

**palm area**

for short or big hand

### Angle

The lateral grip angle of the **0° version** of our grips is calculated so that the shooter can reach behind the pistol, with **barrel axis and forearm forming a line**.

**0 degree**

**7 degree**

**lateral turning**

For right-handed shooters **aiming with the left eye**, or for shooters who have steady a left angled front sight, all grips are also available in a version **turned 7° around the grip axis** towards the trigger finger.

This turning is also beneficial for shooters with **short fingers**.

## Volume

For shooters with **overlong hands**, our grips are also available with a **thicker volume**. With it, the lay of the hand is 5 millimeter at the back, so that the trigger finger doesn't reach too far into the trigger area.

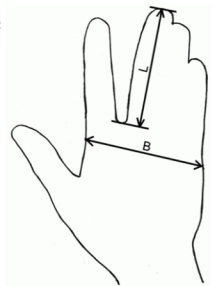

**normal**

**thick**

As "overlong" we call hands where the center finger is **longer than the width** of the hand:
